

ABSTRACT

RFID technology is an automatic wireless identification system that works by the help of two components: a card and a reader. Using the RFID technology, the traditional system of taking attendance can be completely transformed to be more in line with strides in digitalization. This system will help the authorities manage the attendance system in a more methodical, efficient and time saving manner. The proposed system has been implemented through a prototype that has proved the effectiveness of the concept in easing of taking attendance as a result of the automation due to the use of the RFID technology.
